Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Mate position: 3q23-3q25
A; Introns: 1006/3; 1061/1
A; Note: the list of introns is incomplete
C; Function:
A; Note: the list of introns is incomplete
C; Function:
A; Note: iron(II), but not iron(II), is the form bound and transported by transferrin
A; Note: other possible functions are amine oxidase activity, copper transport and hom
C; Superfamily: ferroxidase; ferroxidase repeat homology
C; Superfamily: ferroxidase; alternative splicing: copper; duplication; glycoprotein; oxi

BLOSUM62

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
-!- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
-!- SUBUNIT: FACTOR VA IS COMPOSED OF AN HEAVY CHAIN AND OF A LIGHT
CHAIN NONCOVALENTLY BOUND. THE INTERACTION BETWEEN THE TWO CHAINS
IS CALCIUM DEPENDENT.
-!- DOMAIN EDOMAIN B CONTAINS 35 X 9 AA TANDEM REPEATS, AND 2 X 17 AA
REPEATS.
-!- PTM: THROMBIN ACTIVATES FACTOR V PROTEOLYTICALLY TO THE ACTIVE
COFACTOR, FACTOR V(A) (FORMATION OF A HEAVY CHAIN AT THE N-
TERMINUS AND A LIGHT CHAIN AT THE C-TERMINUS).
-!- DISEASE: OWREN PARAHEMOPHILIA, AN HEMORRHAGIC DIASTESIS, IS DUE
TOM A DEFICIENCY OF FACTOR V. OTHER DEPECTS IN F5 RESULTS IN A
FORM OF THROMBOPHILIA KNOWN AS APC RESISTANCE (APCR). THE APCR
MUTATION IS FOUND IN ABOUT 58 OF THE POPULATION WHICH SUGGEST THAT
A SLIGHT THROMBOTIC TENDENCY MAY CONFER SOME ADVANTAGE IN FETAL
IMPLANTATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   activated

"The complete cDNA sequence of bovine coagulation factor V.";

J. BIOL. CHEM. 267:2971-2978(1992).

-I- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES

WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.

-!- SUBUNIT: FACTOR VA IS COMPOSED OF AN HEAVY CHAIN AND OF A LIGHT

CHAIN NONCOVALENTLY BOUND. THE INTERACTION BETWEEN THE TWO CHAIN
                                                                                                                                                                                                                                                                                                                                   <del>-</del>
